Information following Endodontic (Root Canal) Treatment

- Endodontic treatment can take 1, 2 or 3 appointments depending on each case. It is possible to experience any of the following symptoms after any one of these appointments:
- Sensitivity to hot and/or cold; sensitivity to pressure; possible swelling. It is difficult to predict which symptoms, if any, you may experience and to what extent. In complicated cases, pain medication may be necessary.
- A temporary filling may be used to seal the tooth between visits. Avoid eating hard, sticky or chewy foods in this area. If this crown comes off in between visits, please call our office to schedule a time to recement the temporary crown.
- Be gentle on the tooth while eating until the final restoration is placed. It is common to feel discomfort for several day after the procedure. Ibuprofen and acetaminophen taken as directed may help alleviate symptoms.
- Please call ToothMasters at 256-329-8401 if you experience any unusual or lingering symptoms.
